

Sustainability Certificate

Thanks to a very high level of in-house production at its own production facility in Switzerland, Cleanfix Reinigungssysteme AG can realize massive CO₂ savings. In addition to the high manufacturing depth and thus short, mostly internal transports, several other aspects prove the company's commitment to a sustainable and environmentally friendly production of its products.

Such as...

- Battery recycling according to the official Swiss standard.
- Usage of waste heat from own in-house production to heat the facilities in winter.
- Recycling of old machines according to the highest Swiss standard.
- Recycling of electric motors according to the highest Swiss standard.
- Internal recycling and reuse of plastics from old machines. Depending on the machine, we use up to 25% recycled plastic for the production of new machines.
- High level of in-house production according to Swiss environmental standards.
- Rely on the use of durable components out of environmentally friendly external production, for not in-house manufactured products.

By buying a Cleanfix machine, you are choosing a durable and high-quality product that has been manufactured with a high level of environmental awareness. We care about the longevity of our machines and support you with a comprehensive range of services and easily replaceable spare parts for a sustainable maintenance of your Cleanfix product.
